

EDUCATION

SIES Graduate School of Technology

2022 - 2026

B.E. - Information Technology | CGPA: **8.34 / 10**

Model College, Dombivli

2022

12th | MSBSHSE | Percentage: **80.40 / 100**

Don Bosco High School, Dombivli

2020

10th | MSBSHSE | Percentage: **90.40 / 100**

INTERSHIPS

Nelumbus Technology | IT Product & Services

07 Jun, 2025 - Present

Java Developer

Key Skills: SpringBoot Java

As a Backend Developer Intern, I contributed to the development of DocAI, a document understanding and question-answering platform. The system allows users to input website URLs or upload PDFs, which are then processed through a web crawler and converted into text-based documents. I developed RESTful APIs using Spring Boot to handle text extraction, and semantic search. Extracted content was transformed into vector embeddings using Cohere AI and stored in Pinecone, enabling intelligent question-answering via a Retrieval-Augmented Generation (RAG) architecture. I also implemented metadata tagging and user-linked document storage logic, and prepared the backend for integration with Spring Security to ensure authenticated and context-aware document access.

PROJECTS

Version Control System Backend

01 Jun, 2025 - 20 Jun, 2025

Key Skills: Express.js Javascript MongoDB AWS Cloud

Project Link: <https://github.com/Vedant-1509/vcgit>

- 1.Repository Management: CRUD operations with user ownership & public/private visibility.
- 2.Versioning Workflow: Git-style CLI (init, add, commit, push, pull, revert) via Yargs.
- 3.Commit History & Revert: Snapshot tracking with rollback to any commit by ID.
- 4.User Auth & Profiles: Secure registration, login, profile update & deletion.
- 5.Issue Tracking: Lightweight issue management linked to repositories.
- 6.Remote Upstream: Set and sync remote repositories (Git remote equivalent).
- 7.Real-Time Collaboration: Socket.IO for live repository updates & user tracking.
- 8.RESTful APIs: Modular APIs with Swagger (OpenAPI 3.0) documentation.
- 9.Cloud Storage: AWS S3 integration for storing repo objects & commits.
- 10.MongoDB + Mongoose: Efficient schema design with indexing & relationships.
- 11.Dual Access Mode: CLI-driven and server-driven interactions supported.

Smart Driving Assistance System | IoT + AI Project

01 Mar, 2025 - 15 Apr, 2025

Team Size: 3

Key Skills: Internet of Things Machine Learning Python

- 1.Raspberry Pi 4 Core: Real-time sensor coordination and ML inference.
- 2.Traffic Sign Detection: TensorFlow Lite + Pi Camera for on-road sign recognition.
- 3.Obstacle Detection: Dual ultrasonic sensors for front and rear proximity awareness.
- 4.Python & GPIO Control: Custom scripts for managing vision and sensor hardware.
- 5.Low-Latency Feedback: Synchronized sensor fusion for real-time decisions.
- 6.Modular Design: Seamlessly integrates vision, sensing, and embedded control.

Online Meeting Platform

15 Oct, 2024 - 30 Dec, 2024

Key Skills: ReactJS NodeJS Express.js MongoDB

Project Link: https://github.com/Vedant-1509/video_callwebapp

The Video Call App is a web application developed using the MERN stack (MongoDB, Express.js, React.js, Node.js) and Socket.IO for real-time communication. The app allows users to initiate and join video calls with seamless peer-to-peer connectivity. Key features

include user authentication, creating or joining unique meeting rooms, live video and audio streaming, and real-time chat functionality during calls.

Socket.IO ensures low-latency communication, enabling smooth video and audio transmission. The app leverages React.js for the user interface, Node.js and Express.js for the backend, and MongoDB to store user and meeting data. This project highlights robust real-time interaction, scalability, and an intuitive UI design, making it suitable for personal and professional communication.

taxibooking backend

28 Nov, 2024 - 09 Dec, 2024

Key Skills: Spring Boot Spring Security

Project Link: <https://github.com/Vedant-1509/taxibooking/tree/main/taxibooking>

This project is a Taxi Booking Application built with modern backend technologies for efficient, secure, and scalable services.

Key Features:

- Route Optimization: Integrated the OSRM (Open Source Routing Machine) API to compute the fastest and most efficient routes, enhancing the overall user experience and minimizing travel time.
- Authentication and Authorization: Implemented Spring Security to ensure secure user authentication and role-based access control.
- Geospatial Data Management: Used PostGIS, a spatial database extender for PostgreSQL, to manage and analyze geospatial data, providing accurate location-based functionalities.
- Scalable Design: Architected to handle multiple simultaneous bookings with seamless real-time route calculations.

Wordle_game

20 Nov, 2024 - 03 Dec, 2024

Key Skills: Java

Project Link: https://github.com/Vedant-1509/wordle_game

This project is a Wordle Game developed to offer an engaging and interactive word-guessing experience.

Key Features:

- Backend Implementation: Built using Java and integrated with a MySQL database to manage words, hints, and player data efficiently.
- Dynamic Hint System: Designed a feature to provide hints dynamically, enhancing the player's ability to solve challenging words.
- Interactive GUI: Developed a user-friendly graphical interface to deliver a smooth and immersive gaming experience.
- Scalable Design: The application is designed to handle a growing word database, supporting a wide variety of gameplay scenarios.

ASSESSMENTS / CERTIFICATIONS

Java programming

Key Skills: Java

Spring Boot 0-1

Key Skills: Spring Boot Spring MVC Spring Security

AWS Academy Graduate - AWS Academy Introduction to Cloud Semester 1

The "AWS Academy Introduction to Cloud Semester 1" course provides foundational knowledge of cloud computing concepts and AWS services. It covers topics such as cloud architecture, AWS core services (compute, storage, databases, and networking), and key aspects of cloud security and cost management. The course equips participants with the skills to understand and implement basic cloud solutions.
